SaS: Shared Access Signature

1

Introduction to Azure Data Factory

- Used for data flow activities, to create pipeline
- ADF Components: pipeline, activity, datasets, linked services, integration runtime, trigger, data flow
- ELT vs ETL
- **Integration Runtime:** Azure Auto Resolve: for all azure resources, Self-hosted integration runtime: for on premises, Azure SSIS (**sql server integration system**) ETL tool: lift and shift, take existing ssis package and run in azure environment
